

CRIB APPARATUS WITH SLIDE-OUT MATTRESS ACCESS

Abstract of the Disclosure

A crib apparatus comprises a headboard and a footboard, the headboard and footboard being spaced from and arranged substantially parallel to one another, and first and second side rails. The
5 first and second side rails are spaced from and arranged substantially parallel to one another and substantially orthogonal to the headboard and the footboard. Each of the first and second side rails is operatively attached to the headboard and footboard. The crib apparatus further includes a mattress frame for supporting a mattress, the mattress frame being operatively attached to at least the headboard and footboard and being substantially orthogonal to the headboard, footboard and side
10 rails. At least one of the headboard and the footboard includes an access opening therein through which the mattress can be slidably removed from the crib apparatus.
